## **Tutorial Task 1**

[Mandelbaum et al; <a href="https://zenodo.org/record/3242143">https://zenodo.org/record/3242143</a>]

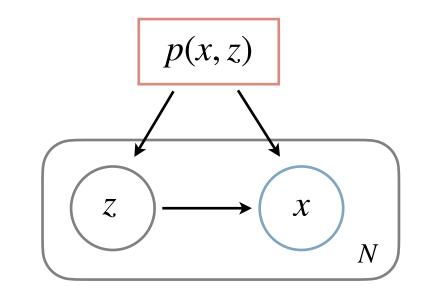

- Construct a VAE and use it to build a generative model of galaxy images using samples form the HST COSMOS dataset
- Boilerplate code for training/reconstruction/ sampling for quick iteration
- Experiment with trade-offs between reconstruction quality and a disentangled latent space

## Outline

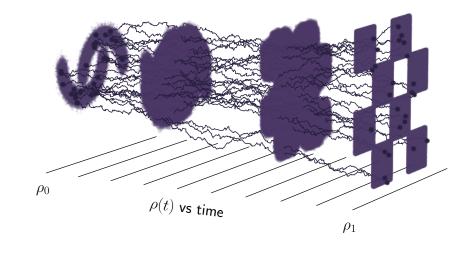

What is it, and what can it do for you?

## Variational auto encoders

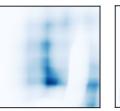

Latent-variable modeling, and compression is all you need

## Diffusion models

Models based on iterative refinement

Normalizing flows (and some other models)

Invertible transformations
